

- 1 Syskit Point continuously pulls data from the customer M365 tenant (by leveraging Graph API, CSOM and Management API)
- 2 The data pulled from Microsoft 365 is processed and enriched by Syskit Point logic
- 3 The data pulled from Microsoft 365 is validated against configured policies and governance rule
- 4 Data is stored within a SQL database, Cosmos DB and storage account
- 5 Syskit Point can create various reports based on the collected data
- 6 Users can access Syskit Point via a browser to view the reports
- 7 Users need to authenticate with their own Azure Entra ID
- 8 Users receive emails for any scheduled reports or detected policy violations (by leveraging the customers Exchange Online or a configured SMTP server)
